

QA Tester Onboarding — Bug Hunt Task

Welcome aboard! Your first task as a QA tester is to test the **Brew & Bean** online order page, find real bugs, and report them like you would in your day-to-day work.

What you need to do

1. Open the assessment website in your browser:

<https://server.peafowl-eagle.ts.net/brewmbeans/> (<https://server.peafowl-eagle.ts.net/brewmbeans/>)

2. Test it on **both platforms**:

- **WEB** — normal desktop browser.
- **MOBILE** — your phone, or browser responsive mode (F12 → device toolbar → pick a phone size like 390px).

3. Find **at least 6 bugs** in the website. Try to break it: empty inputs, invalid emails, past pickup times, many clicks, anything a customer might do.

4. Write every bug you find using the **Bug Report Format** below.

5. Put all your bug reports into a **Google Document** (one bug per page with screenshots).

6. Paste the **link to your Google Document** into the Google Form that will be shared with you.

Platform mapping

Platform	Meaning
WEB	Desktop browser (any browser, normal window)
MOBILE	Phone browser, or browser responsive mode at a phone screen size

Bug Report Format

Use this exact format for every bug:

Title : [FEATURE NAME] [PLATFORM] Short title [check desc]

Platform : MOBILE, WEB

Description : <Explain the issue completely.>

Steps To Replicate :

1. ABCD
2. ABCD
3. ABCD

Suggested Solution : <Suggest a solution that you think can fix the problem>

Media : <Attach an image, recording, or if the file is too big and you wish to share a url, share it in this section. If none, you can remove this section.>

Notes:

- [FEATURE NAME] — the part of the app the bug is in (e.g. Cart, Checkout, Menu).
- [PLATFORM] — use MOBILE, WEB, or MOBILE, WEB depending on where you reproduced it. Refer to the platform mapping above.
- [check desc] — add a short descriptor of what's wrong if the title has one (e.g. "Calculates wrong tax", "Button missing").
- Media — screenshot or recording helps a lot. If the file is too big, share a URL instead. If you have none, remove the section.

Tips

- A bug that only happens on mobile is still a bug — say which platform you saw it on.
- Clear, numbered steps make a bug easy for the developer to fix.
- Quality over quantity: 6 well-described real bugs are better than 15 vague ones.

Once you have completed your bug report, head over to this google form to submit your work : [Google Form Link](#)
